Proportional directional valves with linear motor

**PRL1**

Size 06 (D03) • \( Q_{\text{max}} \) 32 l/min (9 GPM) • \( p_{\text{max}} \) 250 bar (3600 PSI)

### Technical Features

› Proportional valve for remote control of hydraulic motors and actuators
› High reliability
› Centre position maintained by springs consuming no electrical current
› Does not require level of filtration usually demanded by normal servo valves
› Single-stage design ensures high dynamic performance independent of pressure
› Can be supplied as a complete unit consisting of proportional directional valve, electronic control unit and electronic remote control lever
› Model with manual override can be supplied by request
› Control valve with subplate mounting surface acc. to ISO 4401, DIN 24340 (CETOP 03) standards
› In the standard version, the valve housing is phosphated and steel parts zinc-coated for 240 h salt spray protection acc. to ISO 9227
› Subplates - see catalogue HA 0002

### Functional Description

Proportional directional valves PRL1 are designed for remote control of hydraulic motors and actuators. Great reliability is ensured by the robust direct single-stage design and spool actuation with linear motor. Ability of the linear motor is to shift the core into its middle position in case of disconnection of the supply voltage or failure of the cable. Electronic control unit EL2 has been developed to control the proportional valve.

The valve design concept does not require level of filtration usually demanded by normal servo valves.

The manual override enables the control spool to be continuously shifted into the required position. This can be done either from the side of the valve or from the side of the linear motor.

The shifting is not allowed to shift the spool from both sides simultaneously.

The PRL1-valve can also be used as a pilot stage for bigger proportional valves or logic elements (in this case as a unit controlling the pilot pressure). The dynamic properties of the PRL1 valves allow them to be used in closed loop control systems with servo quality performance.
