Explosion Proof Proportional Directional Control Valve

PRMX2-06
Size 06 (D03) • Q_max 28 l/min (7.4 GPM) • p_max 350 bar (5100 PSI)

Technical Features

› Valve and solenoid design prevents a surface temperature capable of igniting
› Solenoid coil in acc. with directive ATEX 2014/34/EU for explosion-hazard zones
› Explosion protection for gas and dust
› Encapsulation enclosure solenoid version
› Direct acting, proportional control valve
› The valve opening and resulting flow rate can be modulated continuously in proportion to the reference signal
› Five chamber housing design with reduced hydraulic power dependence on fluid viscosity
› Coil interchangeability with all Argo-Hytos ATEX/IECEx product line
› 12 or 24 V DC coils, the coil can be rotated by 90°
› In the standard version, the valve housing is zinc-coated for 520 h protection acc. to ISO 9227

ATEX/IECEx Classification

The valves equipped with explosion proof solenoids are available with following certifications and protection modes:

Proportional Directional
Control Valve

Valve size

Spool symbols
see the table „Spool Symbols“

Nominal flow rate at \( \Delta p = 10 \) bar (145 PSI)
10 l/min (2.6 GPM) 10
20 l/min (5.3 GPM) 20
28 l/min (7.4 GPM) 28

Supply voltage / max. current
12 V DC / 1.56 A 12
24 V DC / 0.74 A 24

- For proportional valves with two solenoids, one solenoid must be de-energized before the other solenoid can be charged.
- Mounting bolts M5 x 45 ISO 4762 or studs must be ordered separately. Tightening torque is 8.9+1 Nm (6.56+0.7 Ibf.ft).
- Besides the shown widely used valve versions other special models are available.
  Contact our technical support for their identification, feasibility and operating limits.

Characteristics measured at \( v = 32 \) mm/\( \text{s} \) (156 SUS)

Flow characteristic:
\( \Delta p = 10 \) bar (145 PSI)
Flow direction:
\( P \rightarrow A \) / \( B \rightarrow T \) or \( P \rightarrow B \) / \( A \rightarrow T \)

Nominal flow 10, 20, 28 l/min

Cable length without cable 3000 mm
8000 mm

Surface treatment
zinc-coated (ZnNi), ISO 9227 (520 h)

Seals
NBR

Manual override
standard detent assembly

Temperature class - solenoid nominal power
Class T4 - 18 W

Ordering Code

PRMX2-06 / - B4 - B

Group I (Mining)

Example

ATEX mark of conformity to the 2014/34/EU directive and to the applicable technical norms

I

Group I for mines

M2

High protection - equipment category

Ex e mb

Type of protection: e - increased safety, mb - encapsulated

I

Gas group (methane)

Mb

Equipment protection level - high level protection for explosive atmosphere

Group II

Example

ATEX mark of conformity to the 2014/34/EU directive and to the applicable technical norms

II 2G

Solenoid for surface plants with gas and vapors environment for zones 1 and 2

II 2D

Solenoid for surface plants with dust environment for zones 21 and 22

Ex e mb

Type of protection: e - increased safety, mb - encapsulated

Ex tb

Type of protection: tb - protection by enclosure

IIC

Equipment suitable for substances (gas) of all group

IIIC

Equipment suitable for all kinds of dust

T4

Temperature class (maximum solenoid surface temperature)

T135

Maximum solenoid surface temperature

Gb

Equipment protection level - high level protection for explosive gas atmosphere

Db

Equipment protection level - high level protection for explosive dust atmosphere

Manual Override in millimeters (inches)

Initial installation

- The ambient temperature range shall not exceed the temperatures given in chapter Technical data (page 1).
- The maximum temperature of the medium (generally hydraulic fluid) shall not exceed 60 °C (140 °F).
- It is the user’s duty to ensure free and unhindered heat emission during operation. This means that the solenoid shall neither be covered nor stored immediately adjacent to heat sources (e.g. fan heaters) during operation.
- The solenoid shall not be subjected to direct sunlight during operation.

Installation notice - installation, mounting, demounting

- Using the V DC type for temperature class T4 requires a cable with an operating temperature limit of at least +105 °C (221 °F), e.g. LAPP FD Robust. The fastening torque on the cable gland depends of the used cable and is to be determined by the installing user.
- When installing the V DC solenoid, the fastening torque of the screws shall be 4 Nm (2.95 lbf.ft) and for the BARTEC connection box 0.4 Nm (0.30 lbf.ft).
- When installing the V DC solenoid, an appropriate cable shoe of size M3 with a crosssectional area of 0.75 mm² with an operating temperature limit of at least +105 °C (221 °F) is to be used.
- The user has to safeguard each solenoid with a fuse: I_n ≤ 3xI_G, with trigger characteristic “slow blow”.
  (I_G values see Operating Instructions HA 4090 - Table 2). The breaking capacity of the fuse link has to be stronger than the maximum short circuit current at the user's operating area.
- EX-secured components must be used during mounting in case the fuse and/or the interface are within the EX-range.

Safety notice - Please read carefully

- In case the solenoid shows any signs of a defect, malfunctioning or external damage (including corrosion), the device must immediately be taken out of operation.
- Any deposits on the surface of the device shall not obstruct heat emission.
- To maintain legibility of the data plate, the solenoid must not be coated.

Caution

- Always disconnect the solenoid from the power supply before any maintenance or other work on it.
- Always exchange the complete solenoid. Do not try to repair the solenoid.
- Under no circumstances shall any changes be made to the solenoid or the connecting cable.
- Never operate the solenoid when disconnected from the valve body.
- Demount the solenoid only in secure areas (not in EX-areas). If this is not possible, the solenoid must cool off for at least 10 minutes.
