RNEXH4-25

Size 25 (D08) • Q_{max} 600 l/min (160 GPM) • p_{max} 320 bar (4600 PSI) / 420 bar (6100 PSI)

Technical Features

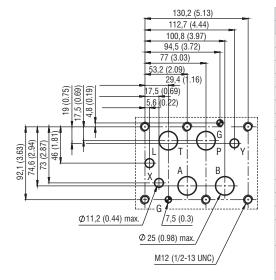

- Directional control valve, internally or externally pilot operated with mounting interface acc. to ISO 4401, DIN 24340 (CETOP 08)
- > Driven by an ISO 4401-03 (CETOP 03) solenoid operated directional valve
- > High pressure version of main stage 420 bar (6090 PSI) available
- > High transmitted hydraulic power, optimized design to minimize the pressure drop
- Flexibly changed from internal pilot or drain to external by inserting or removing threaded plugs in the main control valve body
- > Wide range of interchangeable spools and valve controls available
- > Soft-shift, spool speed, main stroke limiter control options
- In the standard version, the valve housing is zinc-coated for 520 h protection acc. to ISO 9227

ATEX/IECEx Classification

The valves equipped with explosion-proof solenoids are available with following certifications and protection modes:

- *For higher system pressure use option "Z"
- **The values indicated refer to a solenoid valve working with a pilot pressure of 100 bar (mineral oil, temperature = 50 °C, viscosity = 36 mm²/s, P A and B T connected).
- ***Test procedure IP68: Pressure 1 m under water, test duration 24 h.

 The indicated IP protection level is only achieved if the cable is properly mounted.

Installation Note:

- It is necessary to ensure minimum pilot pressure, therefore either external piloting or option C3 (check valve in P port) must be used for spools which have connection between P and T ports (H11, C11, R52, X52, J27).
- Attention: spools J17, J27 may assume an undefined position without energy supply.
- Other special versions are available. Consult our technical department.

X: plug M6x8 for external pilot Y: plug M6x8 for external drain

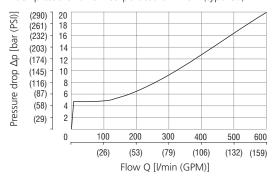

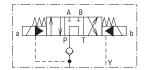

Check Valve Incorporated in Line P

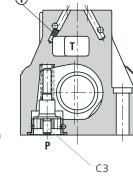

Check valve incorporated in line P: C3

Valves RNEXH are available with a back pressure valve incorporated in line P (Type "C3"). This is necessary to obtain the piloting pressure when the control valve (in the rest position) has the line P connected to the port T (spools H11, C11, R52, X52, J27). The cracking pressure is 5 bar with a minimum flow rate of 15 l/min.

Back pressure valve incorporated on line P (type C3)

pilot always internal Y: plug M6x8 for external drain

The curve refers to the pressure drop (body part only) with back pressure valve energized to which the pressure drop of the reference spool must be added.

In the C3 version the piloting is always internal.

The back pressure valve can't be used as a check valve because it doesn't guarantee sealing.

The back pressure valve can be also delivered separately and it can be easily mounted in line P of the main control valve. Specify the code to order the back pressure valve separately from the spare part data sheet No. 8010.

For detail information on the pilot valve RPEX3-06 refer to data sheet No. 4054.

Actuation in millimeters (inches)

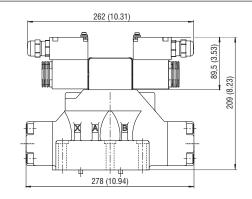

Solenoid control: RNEXH

The valve is supplied with an RPEX3-06 pilot solenoid valve.

The minimum piloting pressure can be as low as 5 bar at low flow rates, but with higher flow rates a pressure of 12 bar is needed.

If the valve operates with higher pressures it is necessary to use the version with external pilot and reduced pressure.

Otherwise, the valve with internal pilot and a pressure reducing valve with a 30 bar fixed setting can be ordered.

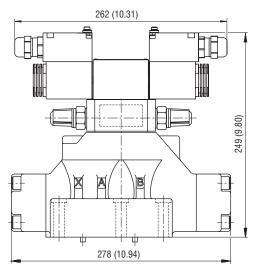

Control of the main spool shifting speed: D

By placing a flow control valve between

the pilot solenoid valve and the hydropiloted valve, the pilot flow rate can be controlled and therefore the shifting speed adjusted. Add the letter **D** to the identification code to request this device.

Pilot pressure reducing valve - 30 bar fixed setting: Z

Internal piloting with mounted pressure reducing valve with 30 bar fixed setting. The option ${\bf Z}$ may be used together with option ${\bf D}$.

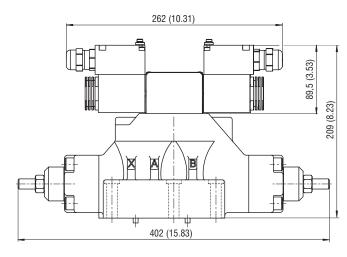

Control of the main spool stroke: C

Using special side plugs, it is possible to introduce stroke control the piloted valve so as to vary the maximum spool opening clearance. This solution allows the control of the flow rate from the pump to the actuator and from the actuator to the outlet, resulting in double adjustable control of the actuator. Add the letter C to the identification code to request this device.

Shifting speed control: PF

with an orifice (0.8 mm) in port P of the solenoid pilot valve Add **PF** to the identification code to request this device

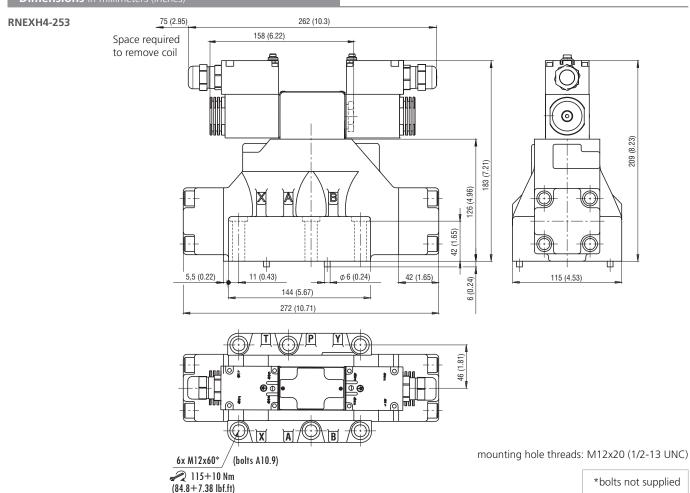

Solenoid operated distributor with pilot valve in the configuration 3H11

It is possible to deliver the solenoid operated distributor with the pilot valve in configuration 3H11 (all the ports at the outlet).

This configuration is used with external piloting in order to allow the unloading of the piloting line when the solenoid operated valve is in the rest position. With this option, the piloting is necessarily external.

Dimensions in millimeters (inches)
