

Flange Screens

S9.1202 · S9.1602 · S9.1702

Flange design · Flange connection up to SAE 3½ · Nominal flow rate up to 2300 l/min / 607.6 gpm

Flange screen S9.1202

Description

Application

- › For integration into return line or return circuits, such as cooling circuits
- › In the system return as a protective device e.g. for cooling systems
- › As a protective device, e.g., for cooling systems or systems with frequently changing components, such as test benches
- › Usually installed directly in the inlet or outlet of the components to be protected
- › Protects hydraulic components from coarse contamination

Features

- › For high volume flows
- › Flange mounting (line installation)
- › Protection against malfunctions
- › Compact design; thus easy retrofitting into existing systems ensured
- › Cleanable
- › Any flow direction possible

Materials

Flange: steel, galvanized
Seals: NBR (FPM on request)
Filter material: stainless steel mesh (1.4301)

Characteristics

Nominal flow rate

Up to 2300 l/min / 607.6 gpm
(see Selection Chart, column 2)

The nominal flow rates indicated by ARGO-HYTOS are based on the following features:

- ▶ Recommended flow velocity in the connecting lines
≤ 4.5 m/s / 14.8 ft/s

Filter fineness

800 μm

(see Selection Chart, column 4)

Hydraulic fluids

Mineral oil and biodegradable fluids
(HEES and HETG, see info sheet 00.20).

Temperature range

-30 °C ... +100 °C (temporary* -40 °C ... +120 °C)

-22 °F ... +212 °F (temporary* -40 °F ... +248 °F)

* < 1% of total operating time, but max. 1 hour continuously

Mounting position

Any mounting position possible, preferably flow direction A → B

Connection

SAE-Flange (6000 psi)

Sizes see Selection Chart, column 6

(other port threads on request).

For installation recommendations, see info sheet 00.325

Quality Assurance

Quality management according to DIN EN ISO 9001

To ensure constant quality in production and operation, ARGO-HYTOS filter elements undergo strict controls and tests according to the following ISO standards:

ISO 2941	Verification of collapse / burst pressure rating
ISO 2942	Verification of fabrication integrity (Bubble Point Test)
ISO 2943	Verification of material compatibility with fluids
ISO 3968	Evaluation of pressure drop versus flow characteristics
ISO 16889	Multi-Pass-Test (evaluation of filter fineness and dirt-holding capacity)
ISO 23181	Determination of resistance to flow fatigue using high viscosity fluid

Various quality controls during the production process guarantee the leakfree function and solidity of our products.
