

Explosion Proof 2/2 Directional Valve, Solenoid Operated, Poppet Type, Piloted

SD3E2X-C2*S5(S6)

1-1/16-12 UN • Q_{max} 150 l/min (40 GPM) • p_{max} 350 bar (5100 PSI)

Technical Features

- › 2/2-screw-in cartridge poppet valve with 1-1/16-12 UN connection thread
- › The valve can be bidirectionally loaded with pressure
- › High tightness of the closed valve
- › Maximum operating pressure 350 bar
- › Certification of solenoid coil ATEX (Directive 2014/34/EU) and IECEx, valid for mines and environments with potentially explosive atmospheres consisting of gases or dust
- › Coil certification "FM APPROVED" valid for USA and Canada
- › Coil protection by flameproof enclosure "d" / "t" (for dust)
- › Robust design resistant to mechanical damage
- › Protection against static discharge by grounding the valve surface
- › Valves applicable for temperature classes T4 (135 °C), T5 (100 °C) and T6 (85 °C) depending on maximum ambient temperature
- › Easily interchangeable direction of power cable entry (axial/radial) into the coil
- › Optional coil supply voltage, valve connection and type of manual override
- › The valve is zinc coated for 520 h corrosion protection in NSS acc. to ISO 9227 and as protection against ignition spark in the event of mechanical impact

Product Description

Pilot operated screw-in cartridge poppet valve, operated by solenoid, bidirectionally loadable with pressure. The valve is designed to dam the fluid flow and stop the appliance. The valve is certified for use in potentially explosive atmospheres of gases, vapours, dust and combustible particles with a high protection level EPL = b.

Use of the valve in potentially explosive atmospheres

12 V / 24 V / 48 V / 110 V DC 110 V / 230 V AC 50 / 60 Hz	Zones	Type of protection – flameproof enclosure

Certifications of valve
No designation ATEX, IECEx, UKCA, FM APPROVED

Surface treatment
520 h salt spray test (ISO 9227)

Seals
No designation NBR, polyurethane

Manual override
No designation standard for 2S6 only
N7 detent assembly for 2S6 only
N9 without manual override

Temperature class - solenoid nominal input power
Class T4, T5, T6 - 10 W

Threaded adapter with thread
M M20x1.5
NPT ½ NPT ANSI

Manual Override measured in millimeters (in)

No designation - standard for 2S6 only	N7 - detent assembly for 2S6 only	N9 - without manual override

In case of solenoid malfunction or power failure, the valve poppet can be shifted by manual override under the condition that the pressure in the back line does not exceed 25 bar (363 PSI).

Dimensions in millimeters (in)

Ordering

The access to the terminal is covered by a steel plug with a seal, mounted on the upper surface of the coil casing. A second hole in the casing is provided for a thread adapter with an optional M20x1.5 (M key) or 1/2 NPT ANSI (NPT key) thread. The thread adapter with a seal is included because the design of the coil casing allows the axial input of the power cable to be easily changed to vertical by interchanging the plug and thread adapter.

Information for customers

- › Before installing the product, please read the Product Instructions for Use, which is available in full on the manufacturer's website (www.argo-hytos.com) near the data sheet. Please also pay attention to the chapter describing the target user group, their professional qualifications and medical fitness to install, use and repair the product.
- › The product may only be used in the zones indicated, otherwise there is a risk of initiating an explosion

Area of application

Equipment - group I – MINES	Equipment - group II (IIG) - GAS		Equipment - group III (IID) - DUST	
Category M1 – NO	Zone 0 - NO		Zone 20 - NO	
Category M2 (the device remains switched off)	Zone 1 Zone 2	IIA (propane)	Zone 21 Zone 22	IIIA (combustible particles)
		II B (ethylene) + H ₂		IIIB (non-conductive dust)
				IIIC (conductive dust)

Note: The valve may be used in potentially explosive hydrogen atmospheres belonging to Group IIC. However, it cannot be used for other Group IIC gases, e.g. acetylene

- › For use in the temperature class, the maximum ambient temperature (see technical data table) must be observed for a given coil input (10 W), the maximum temperature of the working fluid 70 °C and the nominal voltage of the coil supply.
- › The user must ensure free heat dissipation from the valve surface. The surface must not be covered, exposed to a heat source or direct sunlight. When mounting the valves in groups, observe the minimum distances specified in the Instructions for Use.
- › Use a certified cable and a cable gland with protection "d" to prevent the penetration of hot gases into the surrounding environment when an explosion is initiated in the interior of the flameproof enclosure. The insulation must match the temperature class.
- › It is forbidden to install, dismantle or repair the product in an explosive atmosphere. Repairs to the product shall be carried out by the manufacturer, except for repairs permitted by the user under the conditions specified in the Instructions for Use.
- › Attention! The surface of the coil and the valve heats up during operation. There is a risk of skin burns if touched.
