

Hydraulic Mini Power Pack

SMA 05

Q_{max} 17 l/min • p_{max} 250 bar • P_{max} 3 kW

Example: plastic tank version

Technical Features

- › AC and DC electro-hydraulic unit, easy-to-assemble, compact
- › Modularity offers many combinations of hydraulic circuits to suit various requirements
- › Main applications are fork lifts, lifting platforms, automotive lifts, cranes for small trucks, snow plows, machine tools, food and textile industry
- › 7 central block basic circuits options
- › Possibility of building up an additional circuit in the form of vertical or horizontal stacking assembly
- › Rated power up to 3 kW with DC and AC supply
- › Single and triple-phase motors with power ratings of up to 3 kW
- › Tank capacities from 1.5 to 40 l with optional plastic tanks for cost saving
- › In the standard version, the aluminium basic block is without surface protection and steel plate are zinc coated for 240 h protection acc. to ISO 9227

Example: steel tank version

Functional Description

Compact mini hydraulic power packs are designed to fit small design envelopes and can be used in lifting platforms, elevating tables, manipulators, small presses, machine tools and mobile applications. Each power pack consists of an electric motor, a pump, a manifold and a tank. The aluminum body forms the base of the power pack, on which all the main components, including the hydraulic elements, are mounted. The function of the power packs is apparent from the respective hydraulic circuit diagrams. The desired combination of particular components and hydraulic elements can be defined by reference to the ordering code and the respective tables. The additional hydraulic circuits can be built up in valve sizes 03 (RPEK), 04 (CETOP 02) and 06 (CETOP 03). The size 03 (RPEK) is in a form of sectional directional valves. The mounting position of the power pack is horizontal or vertical - see Power Pack Dimensions on pages 12 to 19. All ports have G1/4 internal threads (thread G3/8 to be agreed with the manufacturer). With the standard model, the connecting ports A, B of the components of the vertical stacking assembly are oriented to one side. Orientation of ports A, B to different sides is to be discussed with the manufacturer. The basic combinations of electric motors and pumps as well as their code designations are shown in tables 1 - 5.

Technical Data

Flow rate	l/min	see table 1, 2, 3, 4 and 5		
Working pressure	bar	see table 1, 2, 3, 4 and 5		
Max. operating pressure	bar	see table 1, 2, 3 and 4		
Tank capacity	l	1.5 - 40		
Type of hydraulic pump		gear pump, COUNTER-CLOCKWISE		
Electrical Motor power ratings	kW	0.12 - 3		
Type of electric motor		one- , three-phase AC and DC		
Voltage of electric motor	V	230 AC	230 / 400 AC	12 / 24 DC
Duty cycle S3 of electric motor	%	AC 100, DC see table		
Frequency	Hz	AC 50		
Protection degree of electric motor - insulation class		AC IP 55-F, DC - see table (page 7)		
Viscosity range	mm ² /s	20 ... 100		
Fluid temperature range	°C	0 ... +70		
Fluid temperature range, short-time	°C	-20 ... +80		
Ambient temperature max.	°C	+50		
Thread of functional ports P, T, M, A, B		G1/4 (G3/8 A, B on request)		

	Datasheet	Type
General information	GI_0060	Products and operating conditions

Standard Surface Treatment

Model	Material used	Surface treatment
Cylindrical steel tank	sheet steel	Komaxit RAL 7030
Square steel tank / cover	sheet steel	Komaxit RAL 7030
Cylindrical plastic tank	BOREALIS ME 8131 (transparent)	without surface treatment
Square plastic tank	MOSTEN (transparent)	without surface treatment
DC electric motor		zinc-coated
AC electric motor		RAL 7030
Other components acc. to manufacturer standard		

For other surface treatment consult factory.

Attention! Pay special attention to the start-up torque of single-phase motors. Use the start-up module during start-up under pressure.

- *p_n - nominal pressure = the highest working pressure allowed without time restriction
- ** p_{max} - maximum allowable pressure of the pump for max. 20 sec. Motor overload max. 30 % for max. 20 sec.

In the case of rotation speed control keep the speed limits of the gear pump - see Gear Pumps catalog.

/	44	1	(0.8)	IP 44
/	46	1-1/2	(1.2)	IP 44
51	/	2	(1.5)	IP 54
/	52	2-1/2	(2.0)	IP 54
/	63	4	(3.0)	IP 20

Attention! The DC motors must be loaded, so as to reduce the revolutions! Do not run the motors without pressure loading!

Voltage limits for the switch (between terminals 5 and 6) - min. 18 V for 24 V nominal
- min. 9 V for 12 V nominal

In the case of rotation speed control keep the speed limits of the gear pump - see Gear Pumps catalog.

*Valid for rated power values

Load factor

Duty S1 (min) – Intended for use under continuous duty cycle conditions (load factor S1) for various press-related applications and those which involve dynamic strokes, with recommendation to consult the conditions of use with manufacturer.

Duty S2 (min) - short-time operation

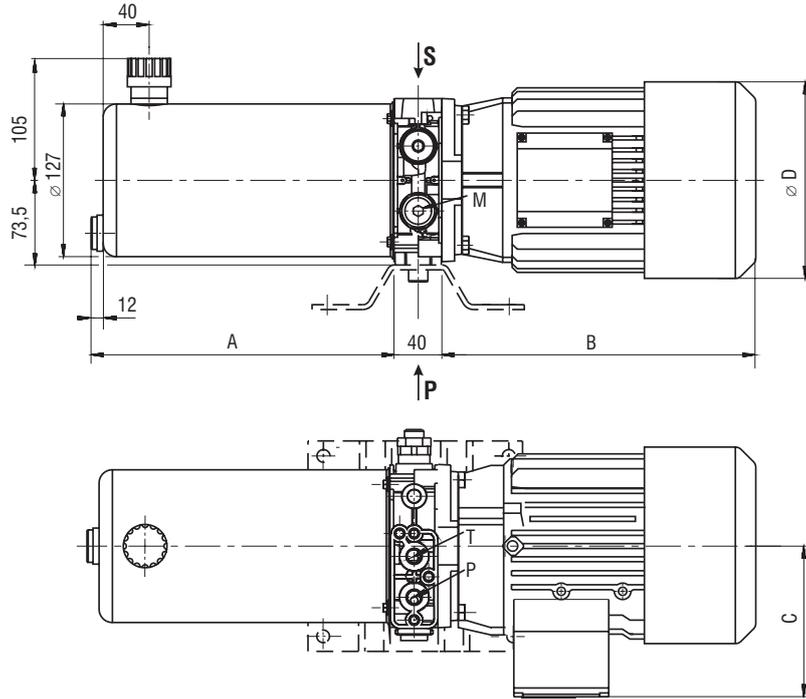

The motor operates with constant load for a definite time until the motor reaches the maximum permissible temperature T max. It is followed by an idle period long enough to reach equality between motor temperature and ambient temperature.

Duty S3 (% ED) - periodic operation

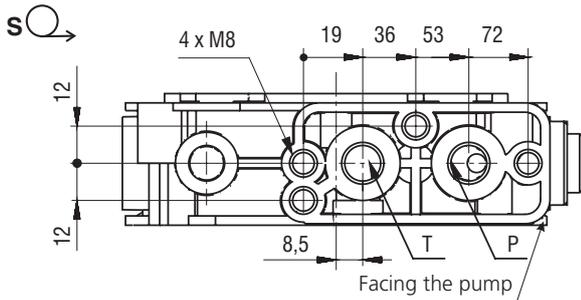

The operation of the motor is a continuous sequence of identical cycles, each compound from a load period and an idle period. During the load period the motor can reach the maximum permissible temperature. S3 value shows, in percentage, the length of the load period with respect to the total cycle-load period more idle period. The S3 curve quoted in the performance specifications is referred to a lengths cycle of 10 minutes.
