

## Your project – Together we succeed

ARGO-HYTOS receives major order from service companies in the wind power industry for filter elements in after-sales with ARGO-HYTOS filter technology

### INITIAL SITUATION

In Germany alone there are currently (2020) around 30,000 wind turbines in operation. This means that the spare parts demand in the service/after-sales area is enormous. As with other applications, high quantities go hand in hand with high demands on performance and quality at low cost.

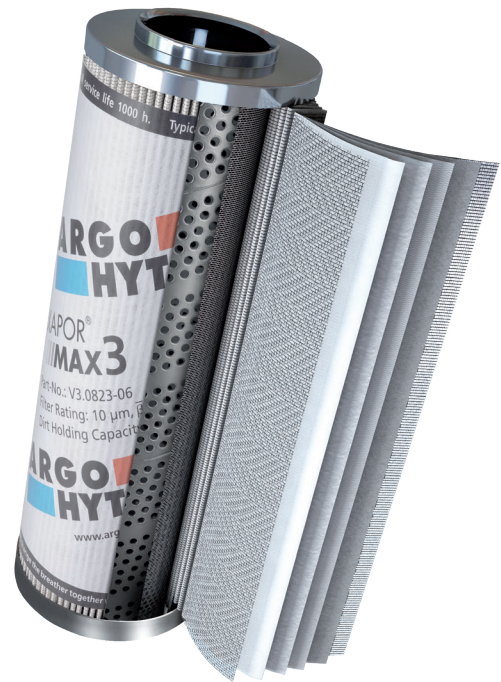

### PROBLEM SOLUTION

Development of cost-effective alternatives for filter elements in lubricating oil systems of wind power plants in the megawatt class, with simultaneous high quality requirements and maximum performance:

- Optimized filter media technology
- New production technology
- Optimized technology for endcaps

## CUSTOMER BENEFITS

- 1:1 Exchangeable filter elements with high performance characteristics
- Successful implementation of cost-saving targets
- Flexible commercial solution
- Filters at best price with high performance

## APPLICATIONS
